Spec

ONOFF DRIVER LADY

- The new POWER TRENCH features a reverse arch which increases the spring effect and widens the sweet spot of the face. The result is increased stability and distance vs the previous model.
- The weight is positioned at the back of the head creating the largest center of gravity angle in ONOFF history.
- Lady golfers consider an easy to swing club to be an easy to hit club, so the new LADY features an adjustable weight function (DR, FW). By changing the weight from 1, 3 or 5g we can find the optimal swing weight to hit the ball further.
- An exhilarating high pitched sound at impact that Lady golfers love, no matter where they hit the ball.
- An original shaft made exclusively for Lady featuring DAIWA CARBON TECHNOLOGY, increases consistency, stability and power transfer all while meeting the need for a light weight club.
