

Easy to address design.
A head shape that increases confidence when setting up and aiming.

Face Laser Milling
Optimal and consistent spin even in poor conditions.

Included Headcover

AUTOMATIC PERFORMANCE

Fly far no matter where you hit it

Forgiving all core design head for more distance

An all core design head designed to produce more power for easy distance and stability.

POWER TRENCH Power Trenches on the sole and crown work together to create a larger sweet spot

OPTIMAL CENTER OF GRAVITY Square to the ball, easy launch, fly far

RAIL SOLE

MORE SPRING EFFECT
Unique face design

The matte finish provides a sporty and high performance look which allows you to aim at the target with confidence.

AKA ORIGINAL POWER TRENCH

POWER TRENCH CREATES A LARGER SWEET SPOT

At impact the face flexes and then recovers shooting the ball forward with more ball speeds and more distance. The larger sweet spot minimizes distance lost on off center hits. Easy distance thanks to our Power Trench.

AKA POWER TRENCH

Maximum forgiveness, automatic distance

The unique Power Trench on the sole creates more consistent face flex and more efficient energy transfer. The result is a larger sweet spot that produces more spring effect, equaling more ball speeds, which in turn minimizes distance loss from miss-hits. More distance and more forgiveness!

Optimal Center of Gravity for AKA

FOCUS ON SQUARING TO THE BALL AT IMPACT FOR AN EASY HIGH LAUNCH, FLY STRAIGHT AND FAR

The center of gravity is optimized for each club, with the average golfer in mind by thinning the crown and lowering the CG for an easy launch. The deep center of gravity and large center of gravity angle result in a utility that is easy to square to the ball at impact and fly straight and far. Better impact, more distance and accuracy equals better scores and more enjoyment for golf.

ONOFF optimal center of gravity design creates a deep center of gravity and a large center of gravity angle.

UNIQUE FACE STRUCTURE

A high strength, hi-maraging, variable thickness face creates more spring effect. The larger sweet spot means even off-center hits still fly far and straight.

A variable thickness face design increase spring effect and widens the sweet spot.

RAIL SOLE CREATES BETTER IMPACT EVEN ON FAT SHOTS

Targeting players want to strike the ball with a level blow, two rails placed on the sole help improve turf interaction and keep the head on-line and square to the ball. The rails prevent the head from losing speed when making impact with the ground, even on fat shots meaning, better shots and automatic distance.

Rail Sole Reduces Resistance

The rails on the sole are especially effective when making a level blow, minimizing a drop in head speed due to contact with the ground. Accuracy is improved thanks to minimal resistance and a clean exit from the turf.

Bringing out the most of the Full Core Design head

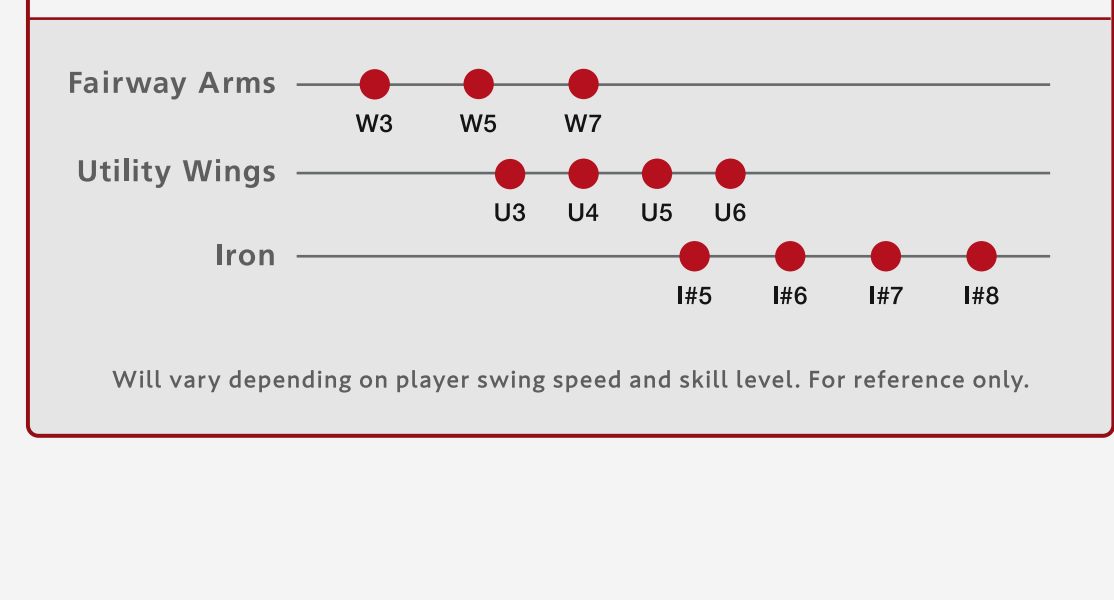

ORIGINAL SHAFT FEATURING DAIWA CARBON TECHNOLOGY

We've created our own original shaft SMOOTH KICK MP-S24U using DAIWA CARBON TECHNOLOGY to match the Utility Wings head for optimal performance and feel. The head is designed to square quickly to the ball for an easy high launch so we increased the rigidity on the tip end of the shaft to increase stability when the fairway wood makes contact with the ground at impact. The AKA Utility not only gets an easy high launch with more distance, but also flies straight at the target.

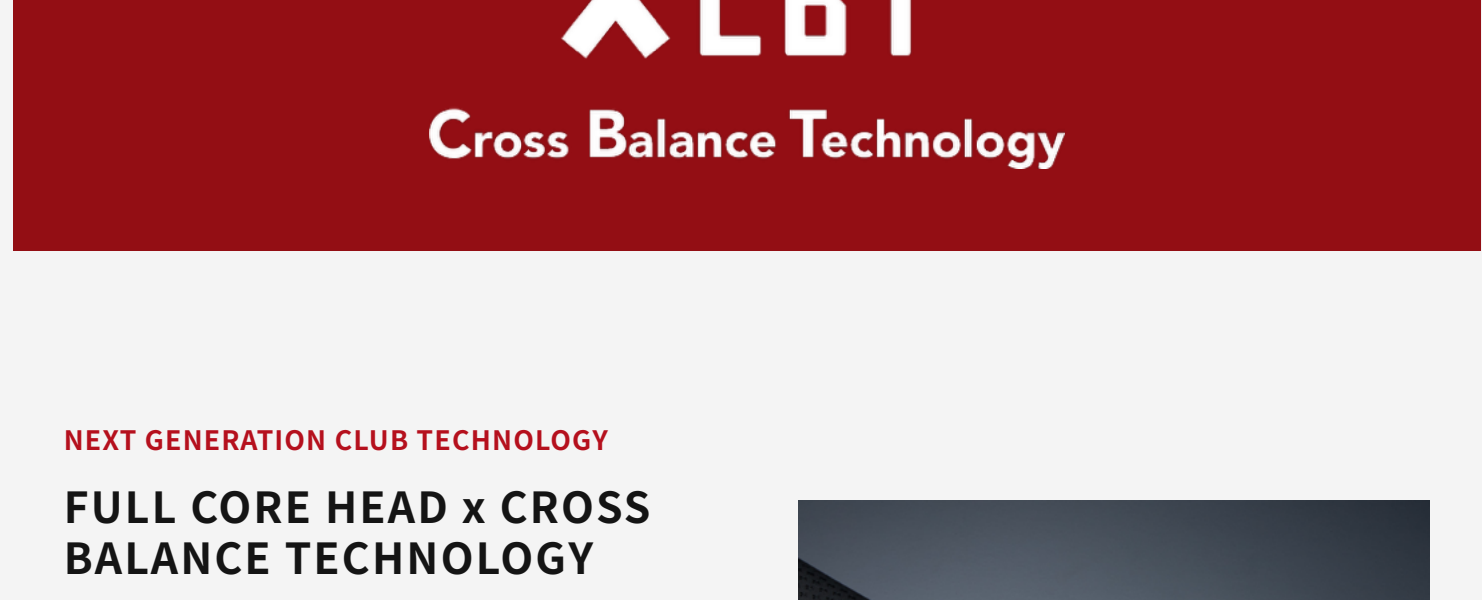

RUBBER GRIP THAT MAXIMIZES HEAD PERFORMANCE

Outstanding grip while having a soft feel
ONOFF PC RUBBER 360 (45g) No Backline

OPTION

NEXT GENERATION CLUB TECHNOLOGY

FULL CORE HEAD x CROSS BALANCE TECHNOLOGY

Our unique Cross Balance Technology allows players to not only fine tune the head weight but to also swap the weights between the head and CBT grip with our dedicated wrench. An all-new system that allows swing weight changes on the fly. Customize the swing weight to match your desired feel for an easier swing. In addition to the standard weights, other weights are sold separately to help fine tune the optimal performance for each golfer.

OPTIONAL PARTS SOLD SEPARATELY

Torque wrench for head (with pouch)

Wrench for grip end

WEIGHT SCREWS

ONOFF CBT Rubber Grip II
Weight 45g/60 dia.

ONOFF CBT rubber grip
Weight 43g/58 dia.

*Please check with your local dealer for pricing
(grips are sold separately with weights.
CBT requires a separate weight screw and grip end wrench)
